

**PAST WARNINGS WERE NOT ALWAYS HEARD
ARE WE MAKING THE SAME MISTAKE AGAIN?**

Today, we are surrounded by radiofrequency radiation. Mobile phones, Wi-Fi, smart meters and wireless networks, including mobile phone masts supporting 2G, 3G, 4G and 5G technologies, are present in our homes, schools, workplaces and public spaces.

Current exposure guidelines are based on protection from short-term heating effects, meaning the warming of human tissue. Yet we are all now exposed to radiofrequency radiation 24/7, while scientific and medical research has repeatedly reported biological and adverse health effects, including cancer, at exposure levels far below those that cause tissue heating.

What does this mean for the health of you and your children, pets, birds, bees and the wider environment?

The research deserves to be heard

www.radiationresearch.org

WHY DOES THIS MATTER?

Research has raised concerns about the effects of exposure to electromagnetic radiation on:

- Children and young people
- Fertility and reproductive health
- Sleep and wellbeing
- Cancer
- Electromagnetic hypersensitivity
- Animals and wildlife
- The wider environment

People should have access to the evidence and information they need to make informed decisions and reduce exposure for themselves and their families.

Don't wait until it's too late.

For many people living with electromagnetic hypersensitivity, it already feels too late. They are the canaries in the coal mine. They are sounding the alarm. Will we listen?

Support our work. Share the information. Help raise awareness.

The EM Radiation Research Trust (RRT) is a UK registered charity established in 2003 (No. 1106304).
